Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of six two-story, two-bay wide houses late Italianate-style brick houses with shed roofs and wooden scroll-sawn bracketed cornices on the south side of Lamley St., east of Madeira St., were built c. 1888 – 1892, when wood was outlawed for use in cornices. All of the houses retain their original brick facades, which were always painted, but one has had its cornice covered with aluminum siding.

The houses are two stories in height, 11'6" wide (with 12'-wide end houses) and occupy lots 43' deep. Each house is two rooms deep and there is no back building. The houses are constructed in common bond and were originally painted. Each house has a single hooded chimney located at the rear of the house. The shed roof is capped by a wooden cornice consisting of a crown molding supported by three long brackets decorated with grooves which connect to a lower molding strip and end with a distinct trefoil pattern. The cornice is also decorated with a row of scroll-sawn modillions set beneath the crown molding against a plain frieze area. Rectangular ventilator panels, with patterns made by a jig sawn, decorate the brick frieze area formed by the long brackets and the lower molding strip and help ventilate the attic.

The door and window openings have segmentally arched brick lintels, with plain tympanums. The sills are wood. All windows are filled with 1/1 replacement sash. 2231 seems to have its original two-light transom, and possibly an original door—with five equal-sized horizontal panels. The houses sit on low basements lit by a single-light sash. Each front door is reached by two, three, or four brick or concrete steps.

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of late-Italianate-style houses is significant in that it represents the level of architectural stylishness achieved by many builders of small street houses in the late nineteenth century.

The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 to \$1,500; small street houses for \$700 - \$900. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The land originally on which these houses are built belonged to the Patterson family as part of their 18th century estate, which also included the land given by the family to the city for Patterson Park. In the 1880s the Patterson heirs began developing this land by leasing parcels to various builders who constructed modestly-scaled and priced housing for the mainly German immigrant families who were settling near the port-related fledgling industries of Canton. Most of the houses sold to mainly German-American semi-skilled tradesmen and laborers employed in nearby factories, who received mortgages from a variety of local building and loans, many of them sponsored by the German community.
